DETAILED ACTION

Election/Restrictions

Claims 32-45 and 77-84 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper filed 10/8/03.

Information Disclosure Statement

The information disclosure statement filed 4/3/02 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4-9, 11-13, 17-20, 46, 47, 50-52, 54-56, 60, and 61 are rejected under 35

U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,721,608 Taniguchi.

FIG. 1 of Taniguchi shows an apparatus including a radiation source (light source 1), a reticle (reticle R) coupled to an actuator (reticle stage RST) to move the reticle perpendicular to a radiation path (optical axis IX), and a substrate support (wafer stage WST) positioned to support a microlithographic substrate (wafer W). The support moving along a substrate support path including a first component generally parallel to the radiation path (col. 5 lines 49-53), and a second component generally perpendicular to the radiation path (col. 5 lines 53-56). Further, Taniguchi teaches that the radiation source may be an ArF or KrF excimer laser (col. 4 lines 34-35) that would inherently emit light with a wavelength of less than 365 nanometers.

Allowable Subject Matter

Claims 21-31 and 62-76 are allowed.

Claims 2, 3, 10, 14-16, 48, 49, 53, and 57-59 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance: An exposure apparatus including a means for oscillating the substrate in a periodic manner during exposure, as described in these claims, is not suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 5,661,546 to Taniguchi discloses a projection exposure apparatus including a reduction lens movable along an optical axis.

U.S. Patent No. 5,796,467 to Suzuki discloses a projection exposure apparatus including a reticle holder and substrate holder that may be inclined with respect to an optical axis during exposure.
